## I CLAIM:

5

10

15

25

- 1. A twist exerciser comprising:
- a base.
- a platform rotatably supported on said base, and
- at least one rotary member rotatably supported in said platform to selectively support feet of users, and to allow the feet of the users to be rotated relative to said platform when said platform is rotated relative to said base.
- The twist exerciser as claimed in claim 1, wherein said at least one rotary member includes a pad disposed thereon to comfortably support the feet of the users.
  - 3. The twist exerciser as claimed in claim 1, wherein said platform includes a seat, said at least one rotary member is rotatably supported on said seat of said platform with a pivot pin.
  - 4. The twist exerciser as claimed in claim 3, wherein said platform includes a cover disposed on said seat, said cover includes at least one opening formed therein to receive said at least one rotary member.
- 5. The twist exerciser as claimed in claim 1 further comprising
  means for applying a resistive force against said platform.
  - 6. The twist exerciser as claimed in claim 5, wherein said resistive force applying means includes a barrel extended from said platform, and at least one belt engaged around said barrel to apply the resistive force against said barrel of said platform.
  - 7. The twist exerciser as claimed in claim 6, wherein said resistive force applying means includes a fastener coupled to said at least one belt, to adjust the resistive force of said at least one belt

applied onto said barrel of said platform.

- 8. The twist exerciser as claimed in claim 1 further comprising a handle supported on said base.
- 9. The twist exerciser as claimed in claim 8, wherein saidhandle is rotatably secured on said base with an axle.
  - 10. The twist exerciser as claimed in claim 9 further comprising means for coupling said handle and said platform together.
- 11. The twist exerciser as claimed in claim 10, wherein said coupling means includes a first follower member attached to said handle, a second follower member attached to said platform, and at least one cable coupled around said first and said second follower member, to couple said handle and said platform together.
